

# ESPAM2 Training Session(s)

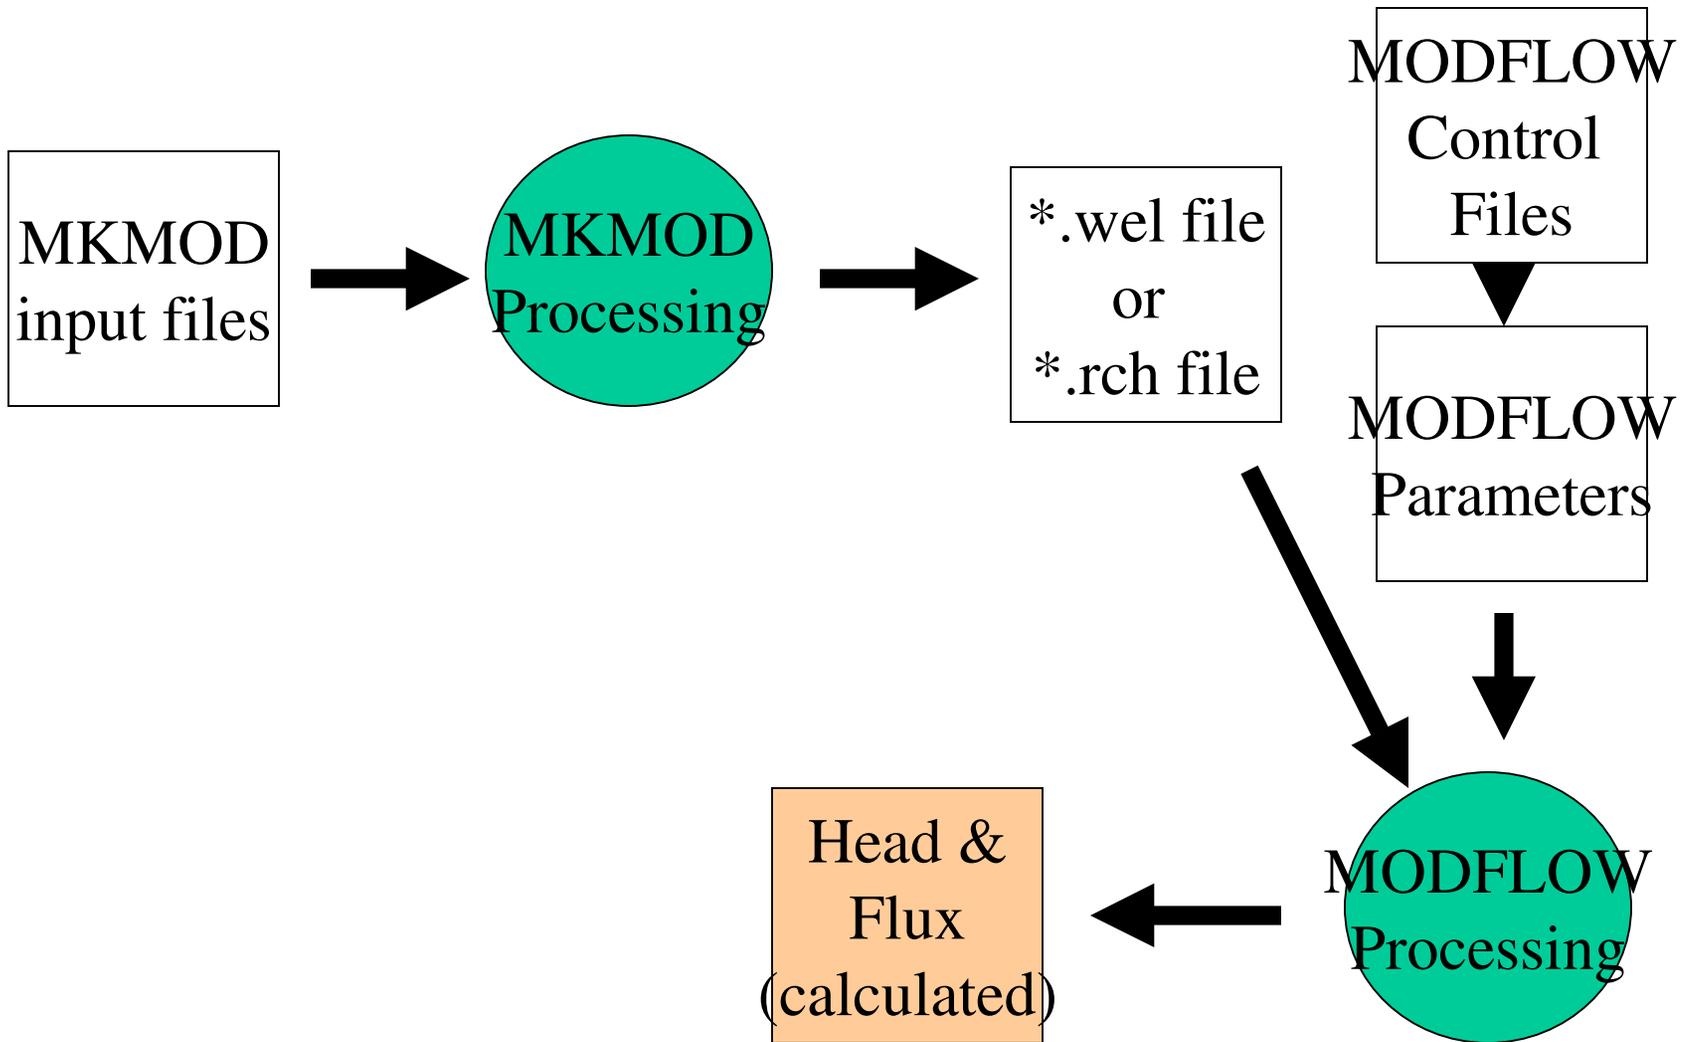

ESHMC 21 September 2010. B. Contor

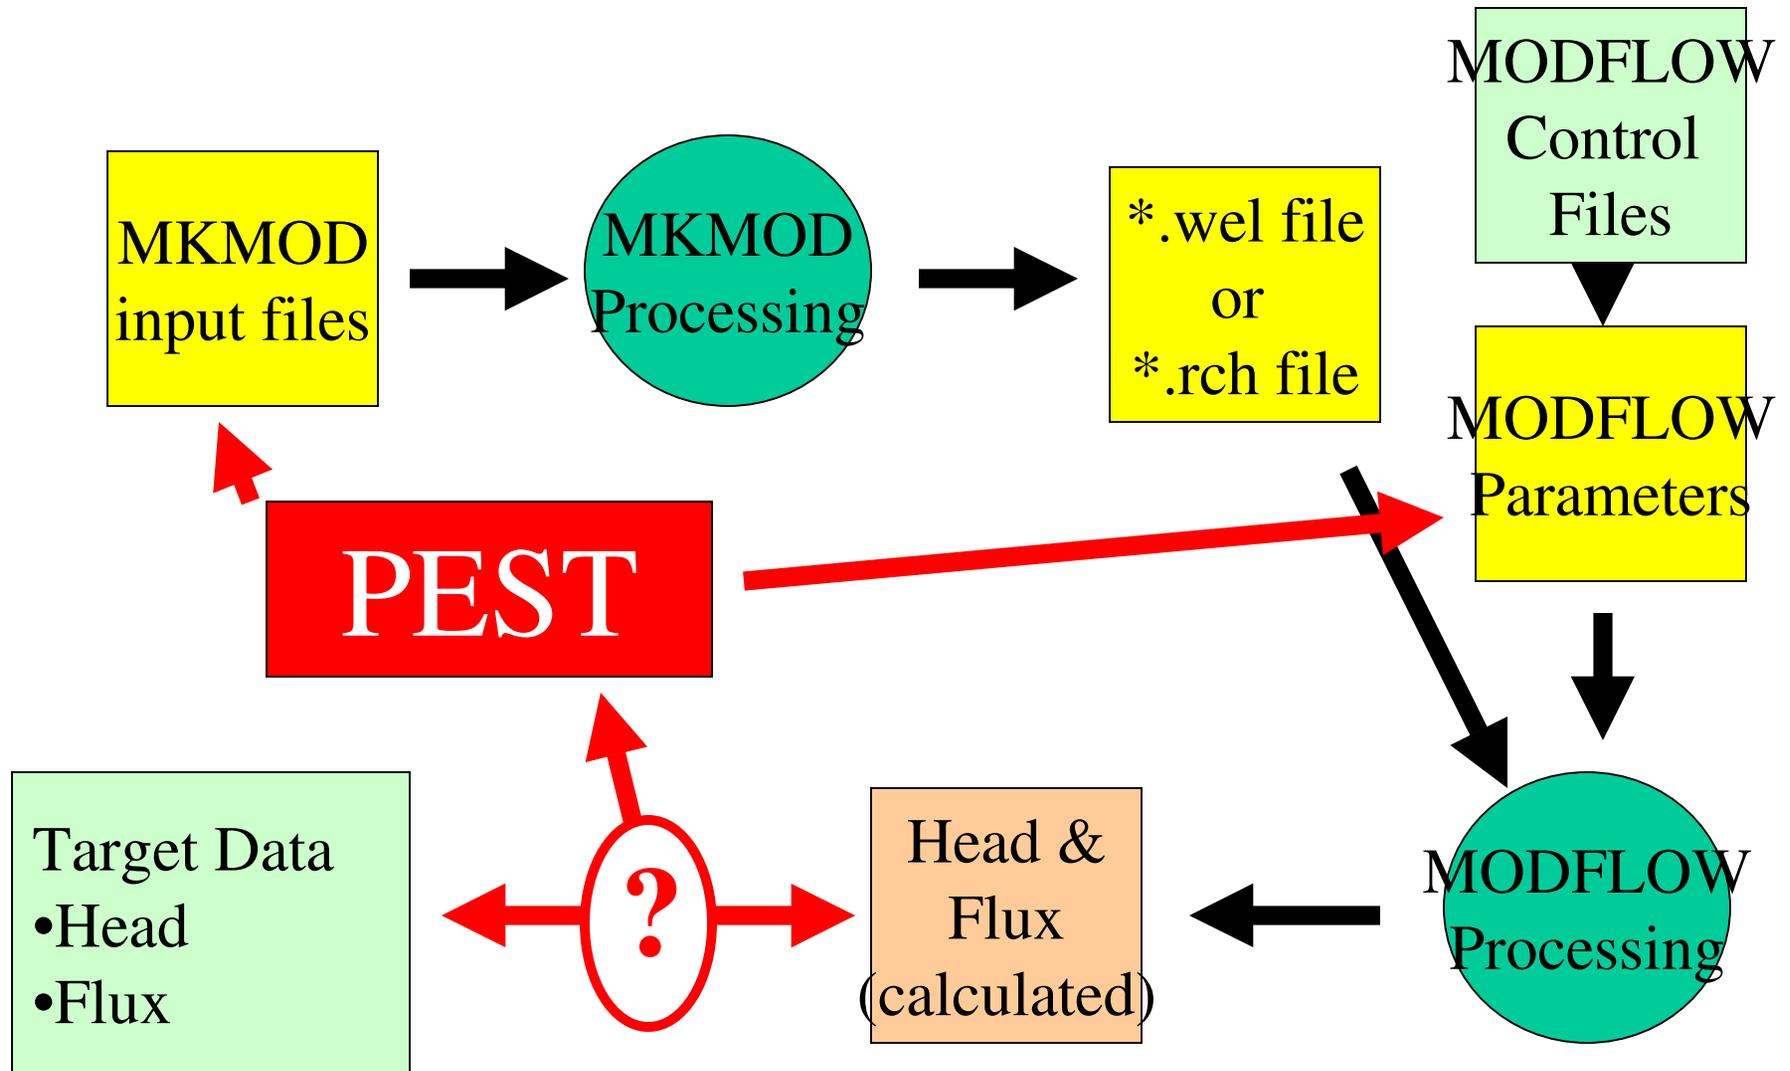

# Overview of the Process (1)

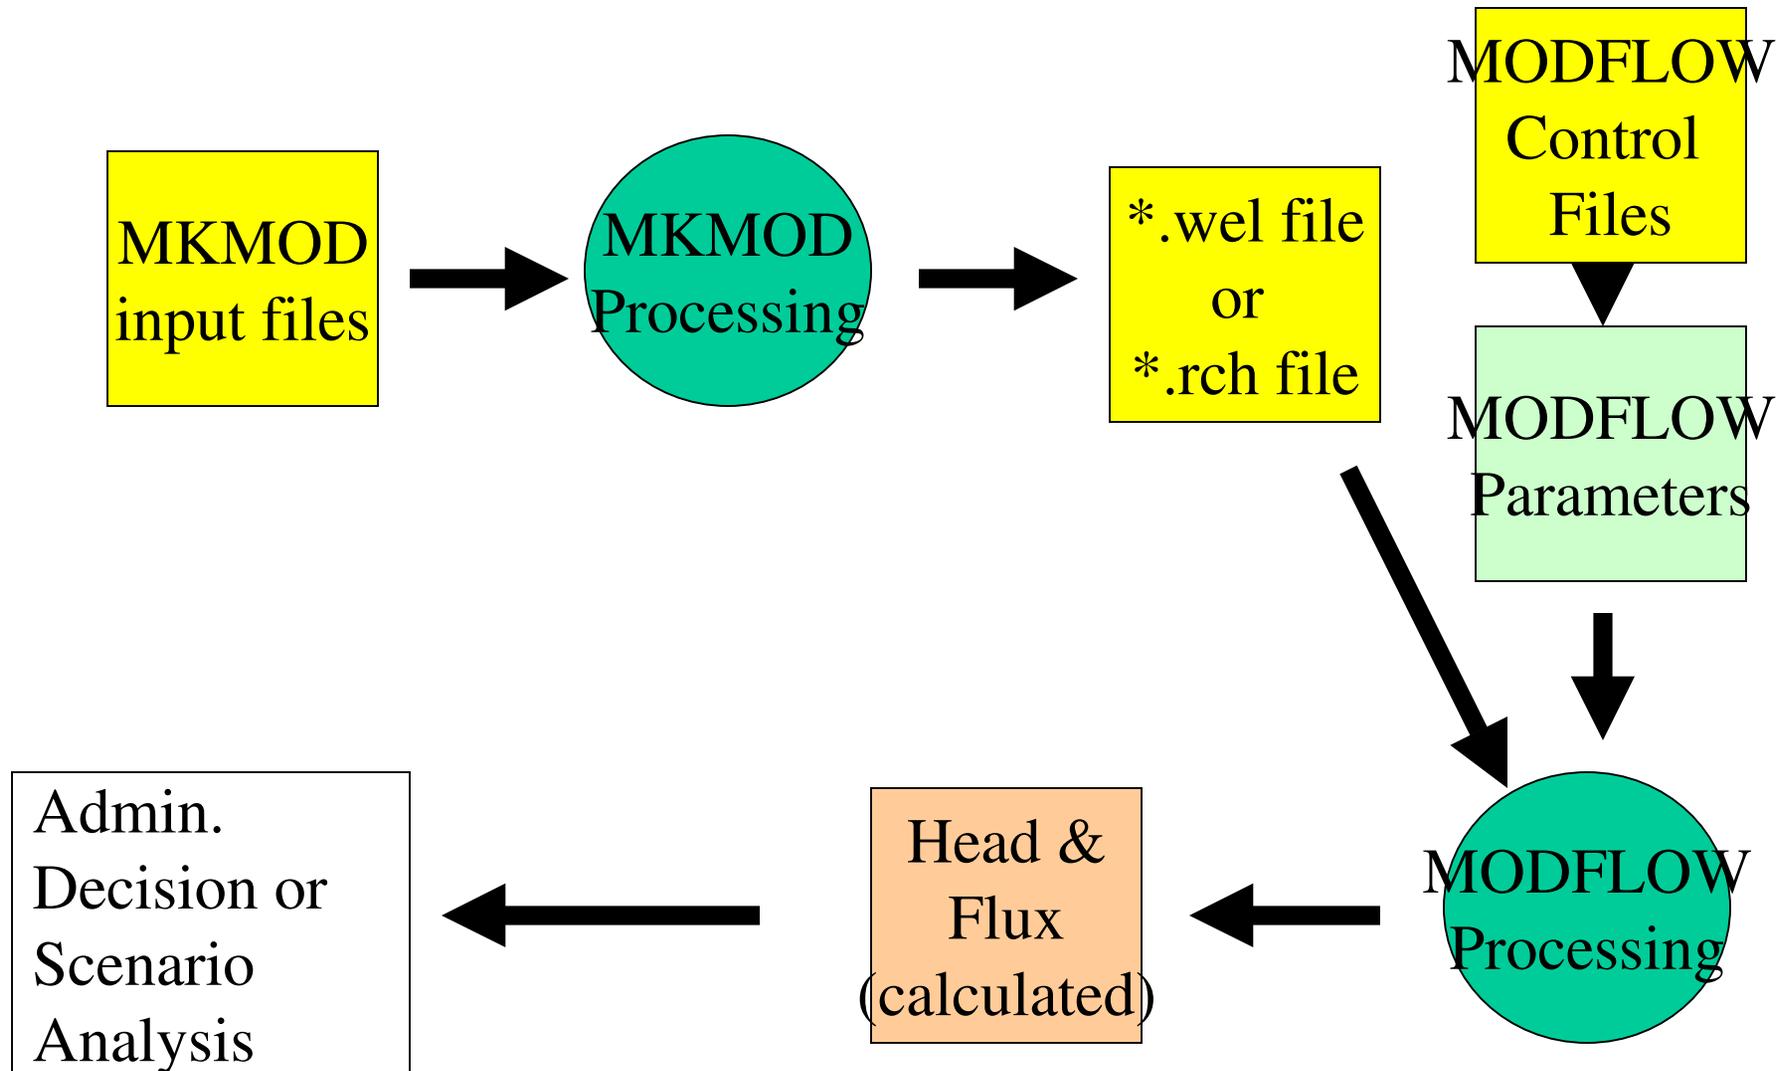

# Overview of the Process (2)

# Overview of the Process (3)

# Overview of the Process (4)

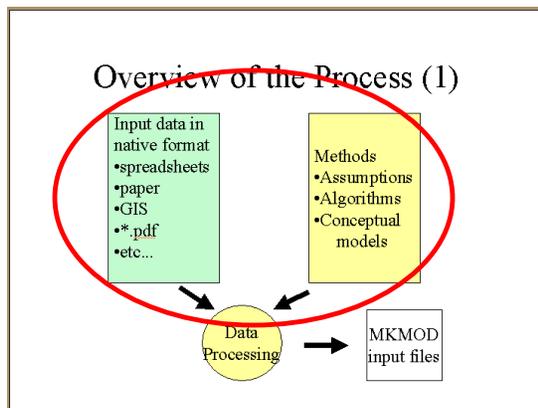

# Four Potential Purposes

- Full Transparency of Water Budget
- How to build input files for MKMOD  
(so we can make our own scenarios)
- How to run MKMOD and MODFLOW  
(so we can run our own scenarios)
- How to summarize the data & output  
(so we know what we done)

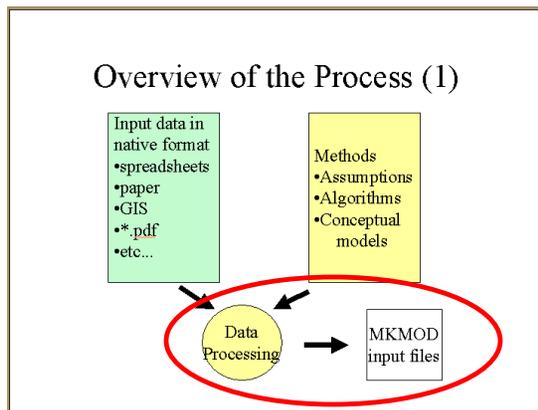

# Full Transparency of Water Budget

- What?
  - input data
  - assumptions
  - algorithms
  - calculation methods
- Who?
  - Bryce and Stacey
- When?
  - Any time, but winter is better
- Time commitment?
  - 2 days in person, or 4 afternoons via GoToMeeting or similar

# Building Input for MKMOD

- Option 1: Contor Pet Grade\* methods & tools

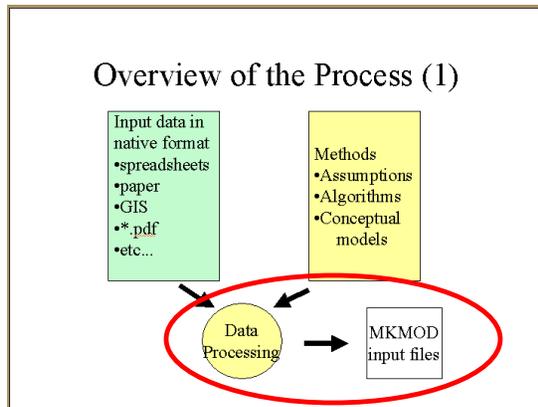

- Who?
  - Bryce  
(& Allan for \*.eff file)
- When?
  - Anytime, but winter is better
- Time commitment?
  - 2-3 afternoons

\*(not fit for human consumption)

# Building Input for MKMOD (2)

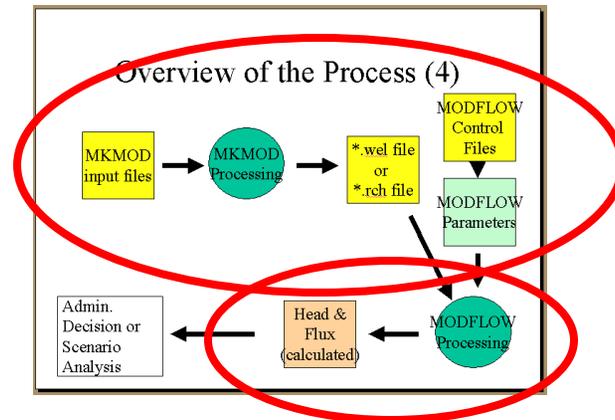

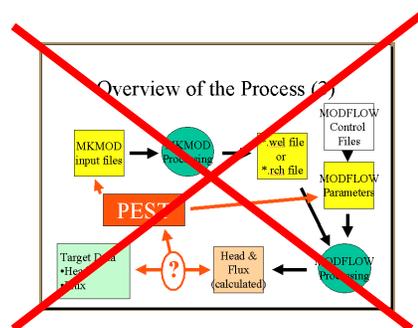

- Option 2: IDWR Professional Grade tools
- Who?
  - IDWR
- When?
  - Preferably after the tools are built
  - Also requires rebuild of MKMOD (maybe)
- Time commitment?

# Running MKMOD & MODFLOW

- What?
  - Use MKMOD to create \*.wel file
  - Set up all the other MODFLOW input files
  - Use utilities to extract output (heads & fluxes)

- Who?
  - Allan & Willem
- When?
- Time Commitment?

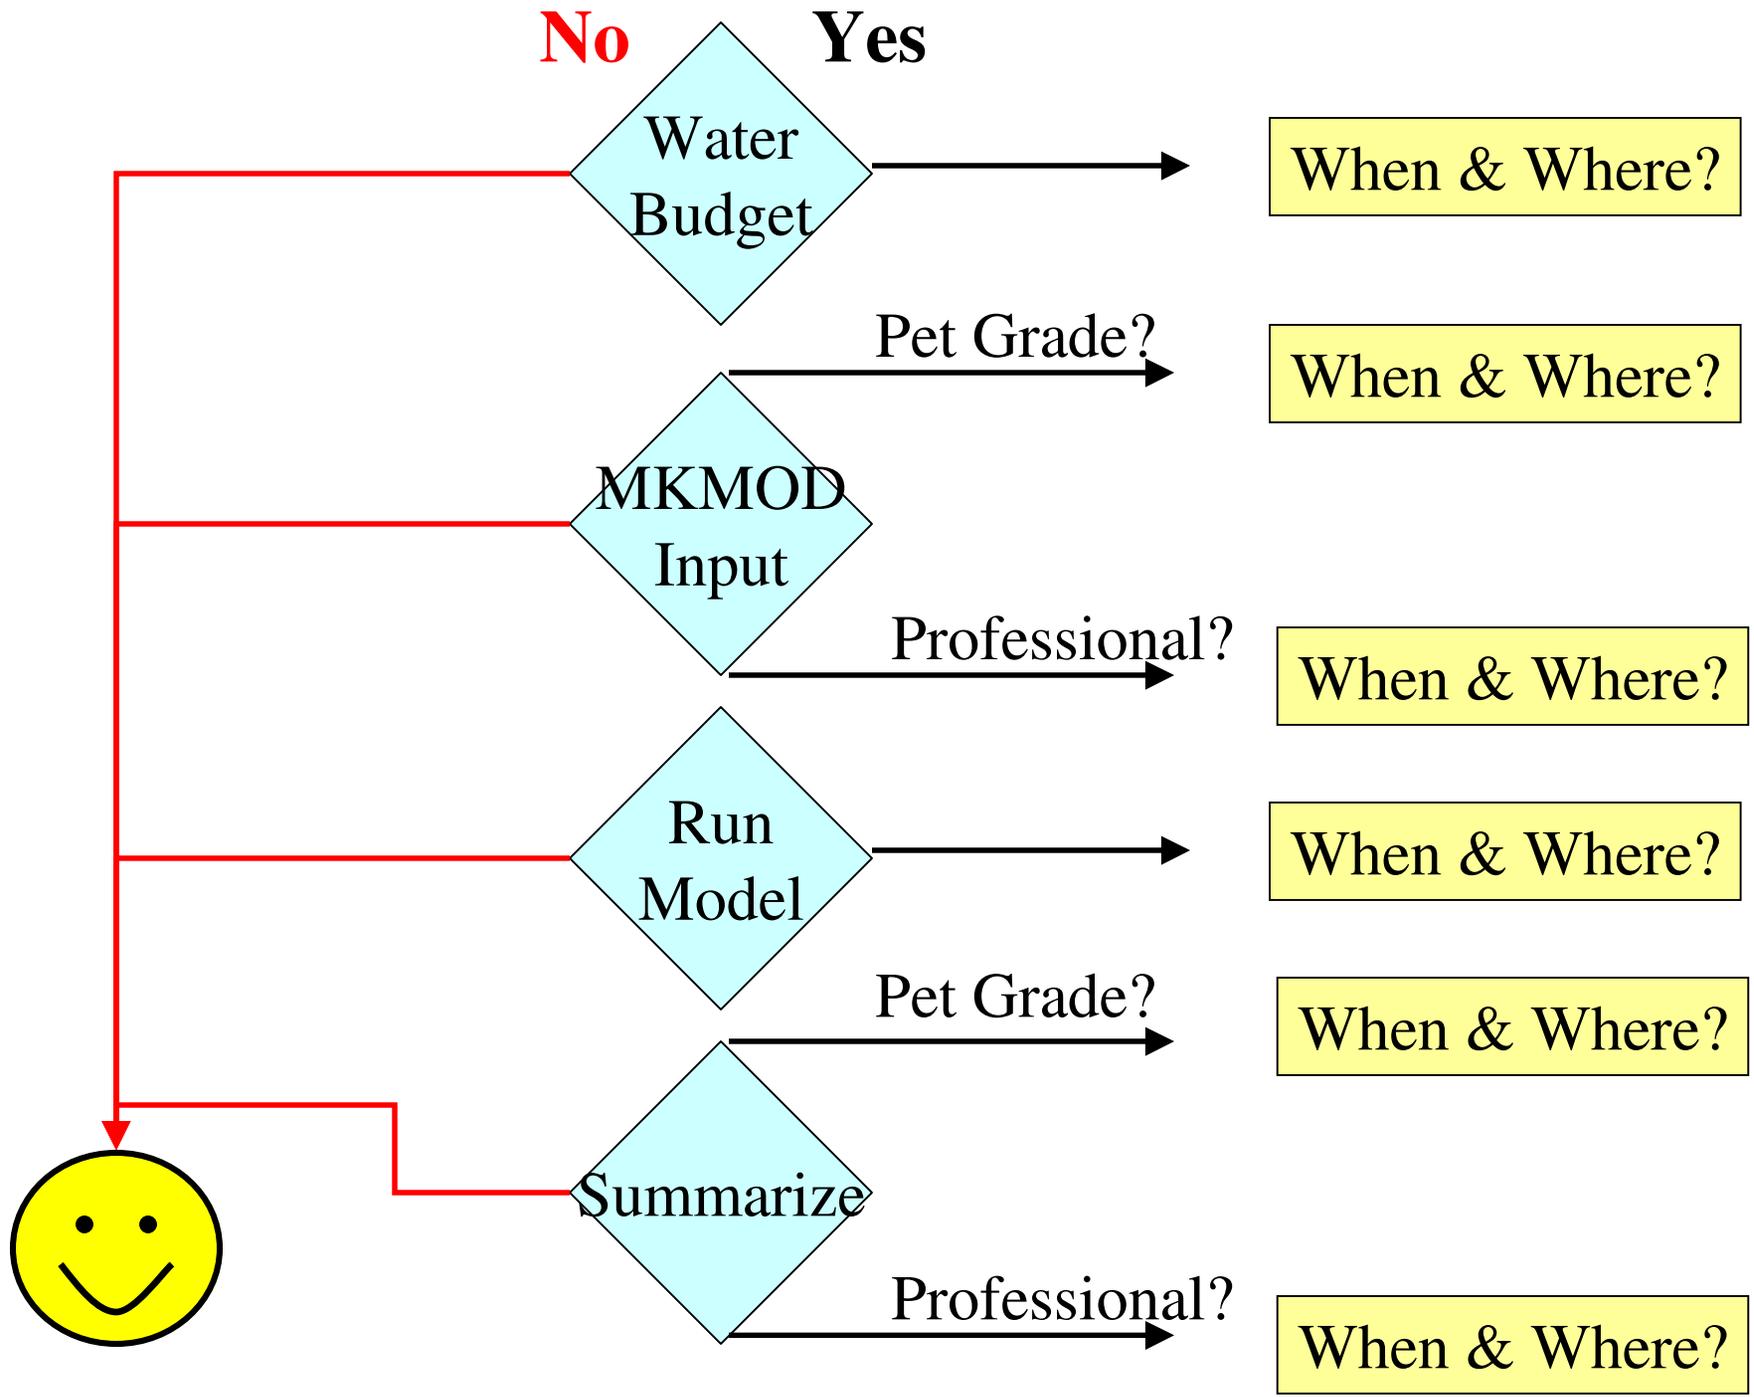

# Summarization and Review

- Option 1: Contor Pet Grade tools and methods, combined w/ existing MKMOD output
- Who?
  - Bryce & Willem
- When?
  - After MKMOD/ MODFLOW
- Time Commitment?
  - 2 afternoons

# Summarization and Review

- Option 2: IDWR  
Professional-grade  
tools
- Who?
  - IDWR
- When?
  - After MKMOD/  
MODFLOW
  - Preferably after tools  
are built
- Time Commitment?
