

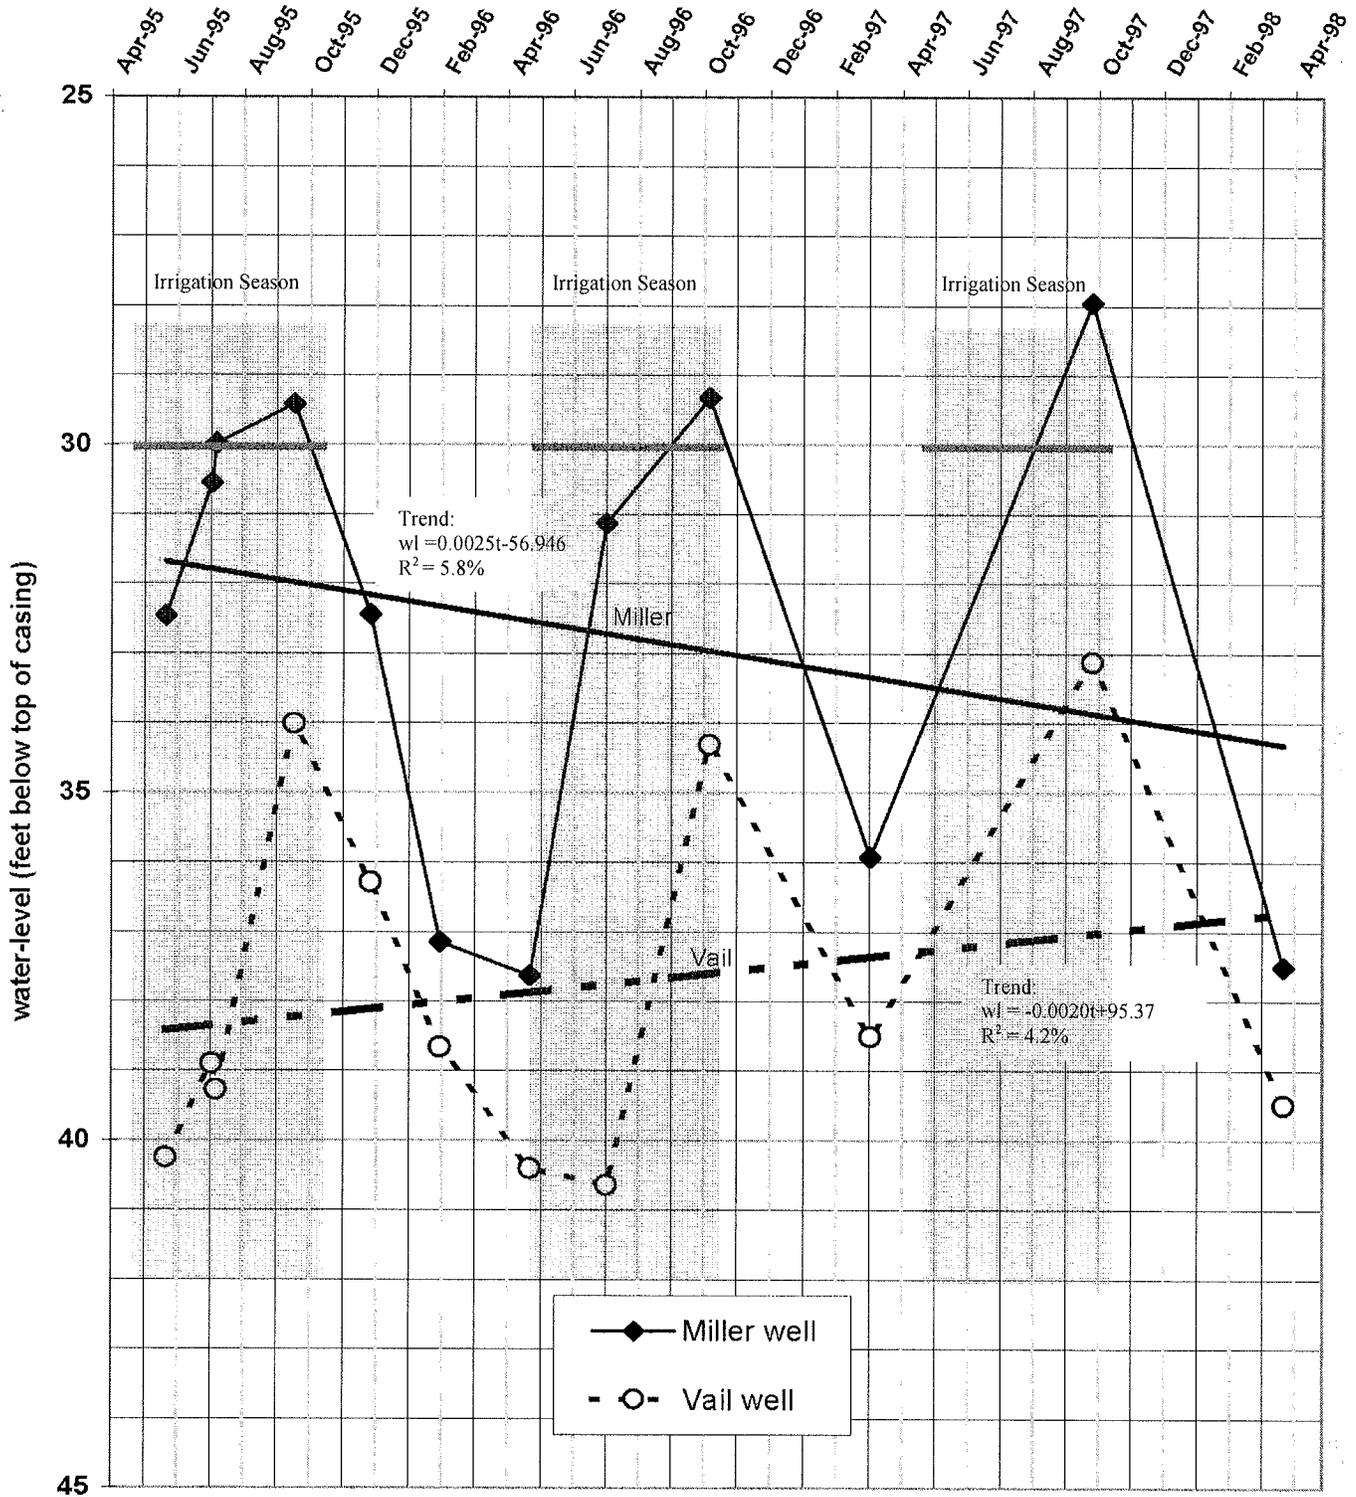

Exhibit XX. Water Levels in the Vail and Miller Wells 6/15/95 – 4/1/98

The data indicate that water levels *rise* in shallow domestic wells during summer when irrigation is applied and the Floating Feather well pumps at higher average rates and *fall* during winter when no irrigation is applied and the Floating Feather well pumps at lower average rates.

No declines in water levels are indicated by pumping at the Floating Feather Well

(based on data provided by United Water of Idaho )
