Re: Beneficial Use Field Exam

I got a phone call from Lori Graves, of SPF Water Engineering this morning. She was responding to my review and my request for additional information associated with the Hillsdale Estates/Willowbrook Development field exam that SPF personnel had conducted.

Lori had not been able to locate the place-of-use discrepancy that I had found and needed me to direct her to it. I was able to help her locate where a portion of lot 59 was positioned in NESE of section 29 and reminded her that that tract was not on either the permit grid or the field exam grid. We agreed that a licensing amendment would be needed and that she would make that necessary place-of-use correction in their response.

She stated that Terry Scanlan had fleshed out the calculation section of the report and that they were intending to send me a revised field exam report.

I was expecting to receive supplemental information not revised field exam report. I had accepted the initial report and so would rather not replace it. I phoned SPF back this afternoon to clarify what I expected from them and to redirect their efforts to a supplement rather than a replacement for their report.
