Status

- Allan is working on 2nd preliminary data set, to start building calibration routines
 - It contains a major Bryce Blunder
- We are on the verge of a 3rd preliminary data set. We know of no unforeseen problems....
- Stacey just finished ET adjustment factors for 2000 & 2006 METRIC data, they will be incorporated in 3rd preliminary.
- We have final 2006 irrigated lands data, already incorporated in 2nd preliminary

What is left?

- Mike McVay is working fast and furious on NIR data (but he has to make a living on the side...)
- Bryce has almost completed 2nd round ad-hoc adjustments to canal seepage & mixed source fractions. These will be incorporated into 3rd preliminary, as well as circulated to ESHMC for review & comment.

Discussion?
