

Water Rights Accounting

New Accounting Model

- New Technology: 1979 versus 2011
 - Faster processors
 - Faster graphics
 - Larger, faster, memory
 - Larger, faster, disk storage
- Common Application
 - Use single application to build and run different accounting models for each river basin.
- Transparency

Software and Hardware Requirements

Build an accounting model

- MS Windows XP or MS Windows 7 operating system
- ESRI ArcGIS Desktop 10
- ArcInfo license

Run an accounting model

- MS Windows XP or MS Windows 7 operating system

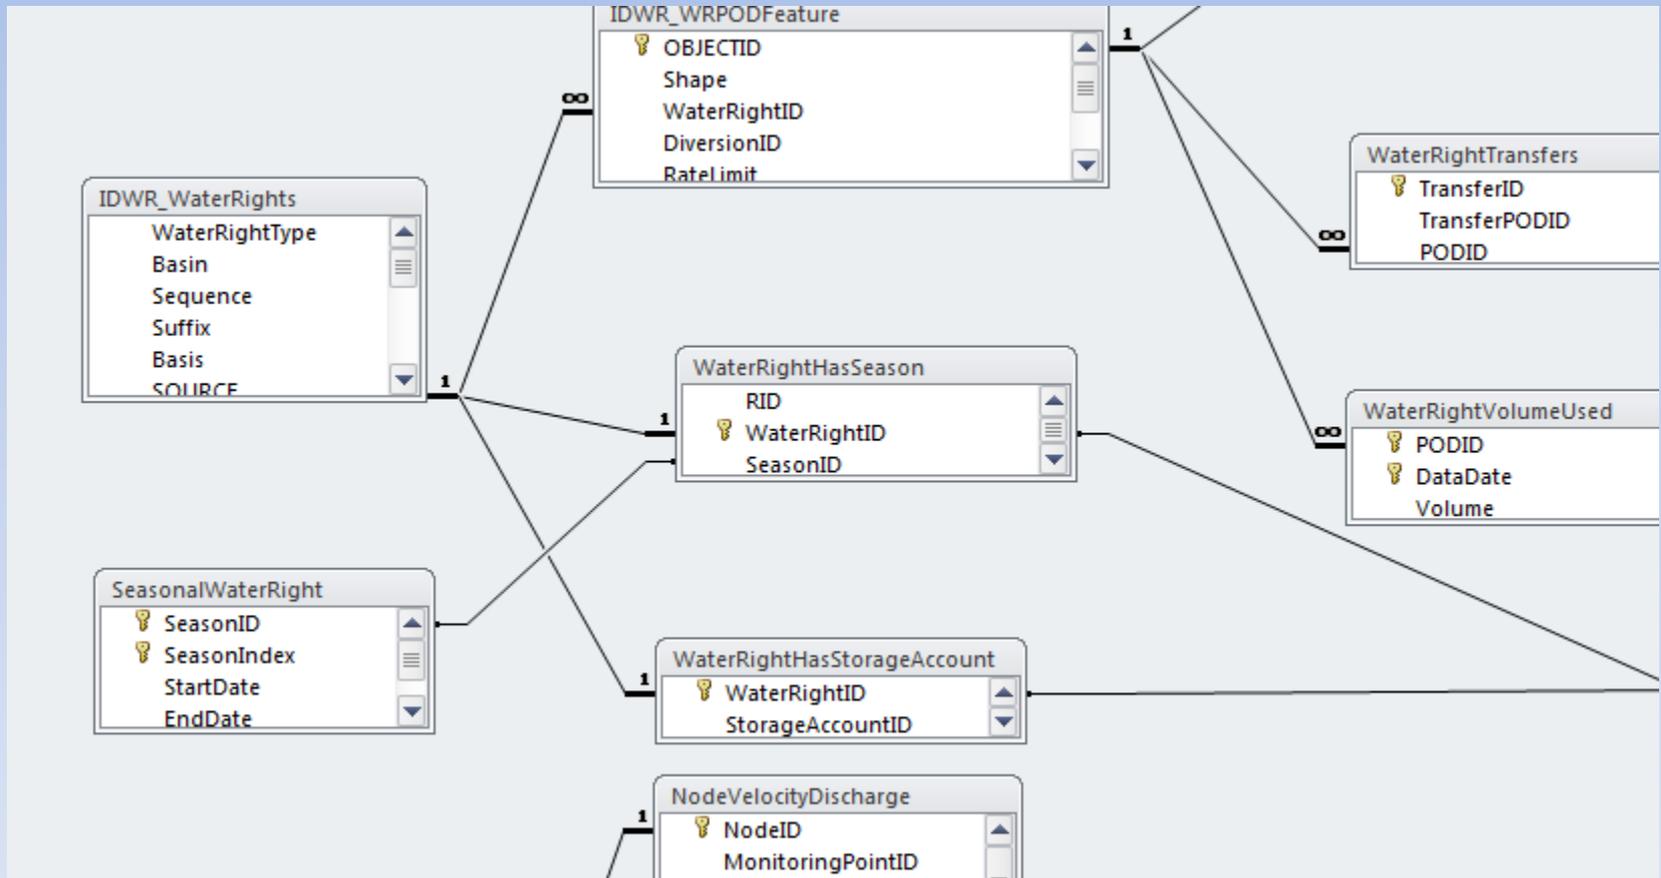

Modify the code

- MS Visual Studio 10

Differences

- Graphical interface
- One application, many models
- Relational database not a Text File
- C# instead of FORTRAN
- Storage model and Accounting model combined into one model

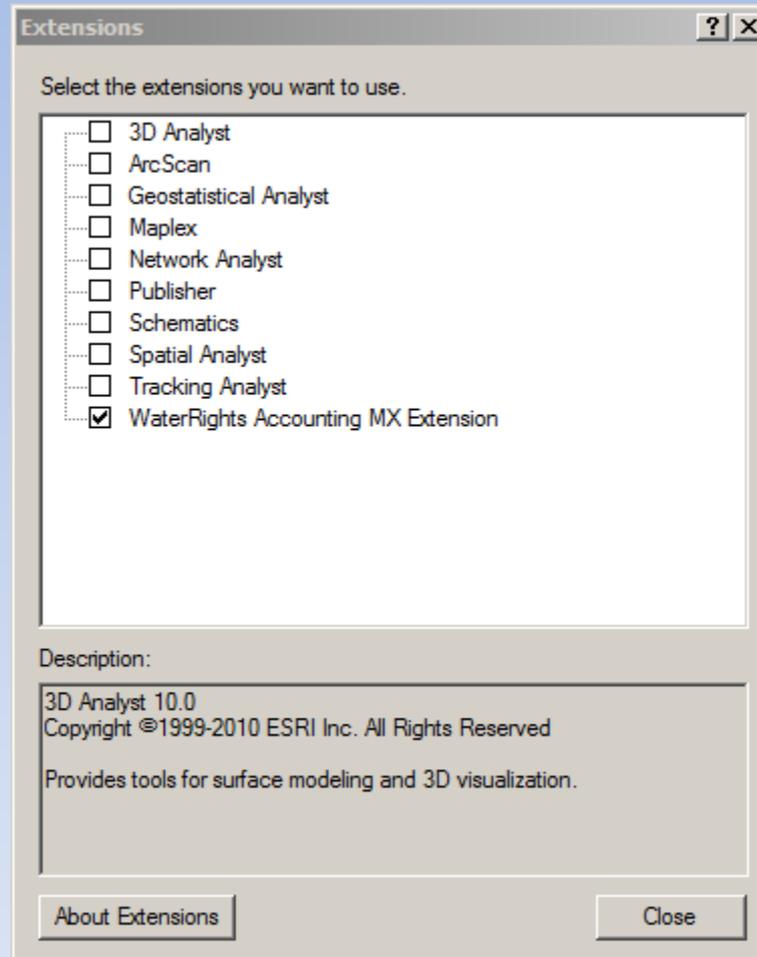

Relational Database

ArcMap Extension

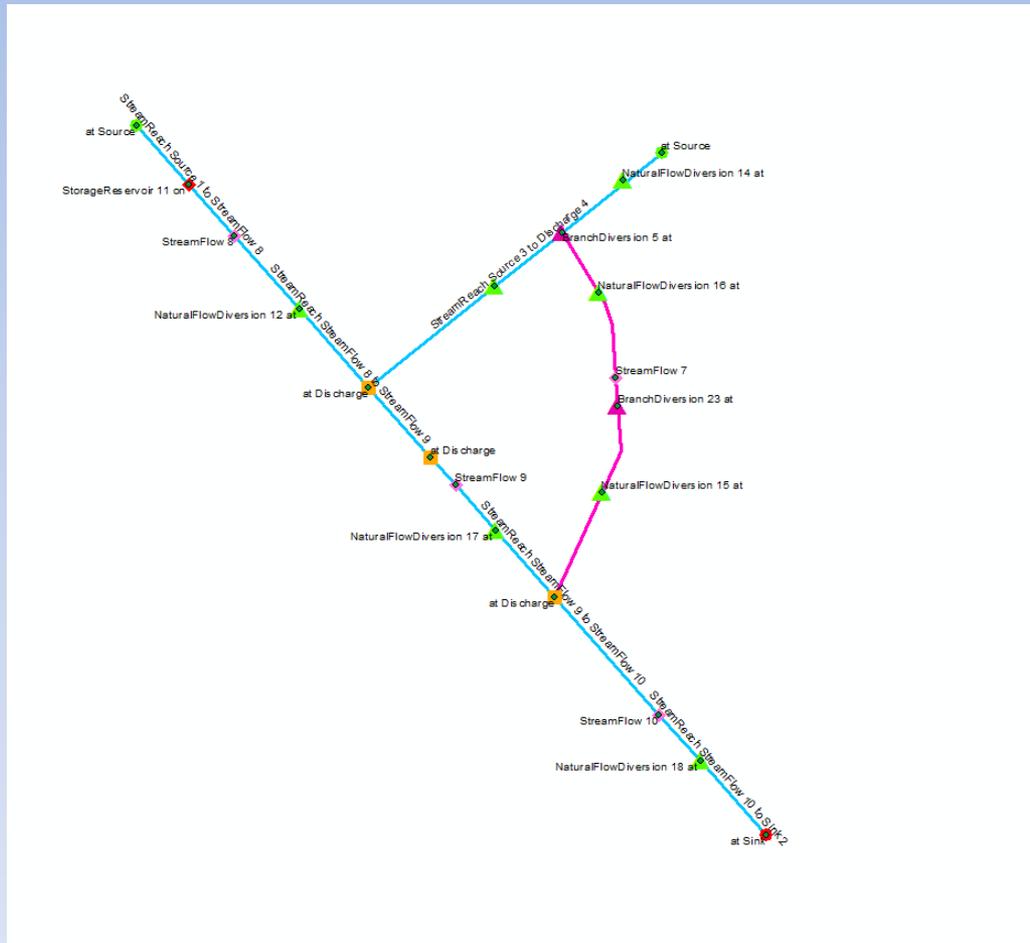

Building A Model

- ArcGIS Map is a graphical user interface used to build an image of a model.
- The image provided in the ArcGIS Personal Geodatabase is used to construct a MS Access database used to run the model.
- ArcGIS is not required to run the model.

The screenshot displays the 'IDWR.WaterRightsAccounting.Extension 2.0.0.0' application window. The 'Properties for #NaturalFlowDiverion' dialog is open, showing the following fields:

- Diversion:** Name: NaturalFlowDiverion 13, Feature Name: StreamReach, Site ID: 13, Node ID: 13, Node Type: NaturalFlowDiverion, Point Of Diversion: NaturalFlowDiverion 13 at, Travel Time: 0, Active:
- Water User:** Current: NaturalFlowDiverion 13 [5], All: BranchDiverion 23 [15], Create Default: , New Water User:
- Required Date Range:** Start: April 16, End: April 16, Apply: , Use Default: , Set Default:

At the bottom of the dialog are buttons for 'Combined D', 'OK', and 'Cancel'. To the right, a network diagram shows a flow path with nodes like 'at Source', 'NaturalFlowDiverion 14 at', 'BranchDiverion 5 at', 'NaturalFlowDiverion 16 at', 'StreamFlow 7', 'BranchDiverion 23 at', 'NaturalFlowDiverion 15 at', 'StreamFlow 9', 'at Discharge', 'StreamFlow 10', and 'NaturalFlowDiverion 18 at'. Red arrows point from the 'Name' and 'Feature Name' fields in the dialog to the corresponding elements in the diagram.

Import Old Accounting Model Data

The screenshot shows the 'ReadHSTDataFileForm' application window. The title bar includes 'File', 'Import', and 'Missing Values' menus. Below the title bar are tabs for 'Data Base', 'Selected Timeseries', 'Missing Timeseries', and 'HST Format'. The main area is divided into several sections:

- HST Data:**
 - HST Data File:
 - Date Filter:
 - Start Date:
 - End Date:
 - Filter by date range.
 - Missing Data:
 - Interpolation Method:
 - Max Missing Days:
 - Check Missing
 - Interpolate
 - Timeseries Filter:
 -
 - Filter by time series ID
- Output Data Base:**
 - Create New Default Database Over Write
 - Directory:
 - Database Name:
 - DataTable:

At the bottom right, there are buttons for 'Save', 'Import', and 'Close'. The text 'No Rows Imported' is displayed in the center of the main area.
